

BUILD YOUR OWN ROCKET LAUNCHER!

You'll Need: Scissors, a Straw, and either Tape or Glue

1. Cut out all the pieces on the solid lines.
2. Tightly wrap the vertical rectangle around a straw. Tape the newly formed cylinder and remove it from the straw.
3. Cut along the solid line to the middle of the circle and stop. Curl one side under the other so it becomes a cone and tape to the top of the paper rocket.
4. Fold along dotted lines of the triangles and tape to the lower part of the paper rocket.
5. BLAST OFF! Slip the straw back into the rocket's opening, and sharply blow through the straw.
